Operation Specification for getConnectivityManager

General | Detail | Preconditions | Semantics | Postconditions | Files | ObjectSwitch

Name: Class: DCFactoryImpl

Return Type: ☒ Show classes

Stereotype:

Export Control: ☒ Public ☐ Protected ☐ Private ☐ Implementation

Documentation:

```

/*This method is called by the DCCClient to get a connectivity manager
reference with which it needs to interact. */

//We have a single connectivity Manager for both the protocols.
declare::DCUtilityPackage::ConnectivityManager myConnectivityManager;
select myConnectivityManager from singleton::DCUtilityPackage::ConnectivityManager;
return myConnectivityManager;

```

OK Cancel Apply Browse Help

```

myConnectivityManager_iter1.addFilter(DCUtilityPackage: :ConnectivityManager: :DomainId,
